DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-7 and 21, drawn to a dual-slot valve, classified in class 251, subclass
 195.
- II. Claims 8-15, drawn to a hybrid method of making and/or using a dual-slot valve,classified in class 137, subclass 1.
- III. Claims 16-20, drawn to a wafer-processing system with a computer workstation, classified in class 414, subclass 217.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require selectively and separately moving either of the first and second doors to close their respective slots. The subcombination has separate utility such as a valve in a hyperbaric chamber.
- 3. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product

Application/Control Number: 09/541,069

Art Unit: 3754

as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product can be used in a process that does not involve movement of the doors along linear paths or common movement of the doors upon application of a slot closure force.

Page 3

- 4. Inventions III and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the process can be used in a materially different process that does not require an actuator and a dual-acting actuator mechanism.
- 5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because the search required for any Group is not required for the other Groups, and because these inventions have acquired a separate status in the art because of their recognized divergent subject matter. restriction for examination purposes as indicated is proper.
- Applicant is advised that the reply to this requirement to be complete must include an 6. election of the invention to be examined even though the requirement be traversed (37 CFR) 1.143).

Art Unit: 3754

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric Keasel whose telephone number is (703) 308-6260. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene Mancene can be reached on (703) 308-2696. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
